

Can be mounted in front of the spindle shaft after the installation of the collet. Has the advantage of being adaptable to HSK-E or HSK-F tool interfaces in an HSK-A spindle. Just use the drive key to expand and then clamp the desired tool. The ENS slot nuts can also be used in manual clamping units for more flexibility. Available for HSK 32, 40, 50, 63, 80, and 100.
