

Self-traveling (Automatic) quick die changing system with push drive chain style clamping

The push drive chain-type hydraulic die clamping system is designed for clamping dies of various widths on press slides. The push-pull chain actuator moves automatically in the T-slot of the press slide between the parking position and the respective die. Hydraulic pressure is at a maximum 400 bar. The push-pull chain actuator can be used alternative to the PSV/PLV clamping actuator for every BERG press clamping system.
