The AZS gripper is specially designed to manually mount heavy grinding wheels to a standard HSK 100 tool interface.

The grinding wheel is mounted onto a HSK-style tool holder and is held to the spindle extremely accurately. The gripper allows very high clamping forces in a compact design. For example, the clamping force is 55 kN with a clamping torque of only 30 Nm for HSK 100.

If needed, this AXS-100 gripper could be adapted for any HSK standard.
